

ABSTRACT OF THE DISCLOSURE

An integrated display personal computer in which a display unit such as a liquid-crystal panel and a PC unit are integrated into a single housing. The display unit can be used as a display for other notebook-sized personal computer or as that for a portable DVD player. The integrated display personal computer is provided with an input terminal and a signal selector for supplying either of a signal from the PC unit and a signal from the other device to the display unit selectively. Provided is a power distributor for supplying the electric power to the PC unit and the display unit selectively in response to the operation of the signal selector. When the signal from the PC unit is supplied to the display device, the power source power distributor supplies the electric power to both the PC unit and the display unit, while when the signal from the other device is supplied to the display device, the power distributor supplies the power to the display unit.
